Iyinoluwa Sopeyin

(443) 580-6685 | iyinoluwasopeyin@gmail.com | linkedin.com/in/iyinoluwa-sopeyin | github.com/IyinoluwaS

Education

Livingstone College Salisbury, NC
Bachelor of Science in Computer Science Expected Graduation: May 2029
4.0/4.0 GPA | Presidential Scholar | Honors Program Member
Relevant Coursework: Introduction to Programming, Python, Data Structures and Algorithms, Calculus

Projects and Hackathons

Syllo | *Python, FastAPI, NVIDIA Nemotron, Pydantic, React, TypeScript* Sept. 2026
SteelHacks, University of Pittsburgh | *Backend Lead, 2-Person Team* | GitHub

- Led a **2-person** hackathon team's backend development, building a Python/FastAPI pipeline that converts Canvas EPUB exports into structured deadlines, exams, schedules, and course policies.
- Integrated **NVIDIA Nemotron** for AI extraction using batched requests, Pydantic schema validation, source-quote verification, bounded retries, and provenance tracking to reject unsupported academic data.
- Implemented deterministic parsing, archive validation, and content normalization with safeguards against path traversal, XML external entities, zip bombs, and excessive decompression.

Ledger Agent | *Python, LangGraph, SQLite, SQL, pytest* 2026

- Developed an AI application in Python with LangGraph and SQLite that translates natural-language questions into validated SQL queries over financial data.
- Achieved **94% accuracy**, up from **62%**, on a **16-question** experimental evaluation using automated SQL query repair.
- Built an evaluation and ablation framework to analyze failure patterns and compare query-repair effectiveness; used pytest in the project toolchain.

Experience

AI / Document Intelligence Extern Aug. 2026 - Present
Pfizer Advanced: AI-Powered Document Insights & Data Extraction Externship

- Developed a Python document-intelligence workflow for pharmaceutical documents, applying preprocessing and structured extraction to support clinical supply document review.
- Built document-processing components that transformed unstructured content into organized data for downstream search and question answering.
- Through a **10-week** applied AI program, expanded skills in OCR, retrieval-augmented generation, and retrieval evaluation while working toward an interactive Gradio search interface.

Leadership and Campus Involvement

Livingstone College Honors Program | *Member*

- Support **6 peers** through weekly study sessions, coordinating concept reviews and shared study guides while maintaining a **4.0 GPA**.

Livingstone College Blockchain Club | *Member*

- Participate in peer learning on blockchain, AI, and Web3 through campus technology activities and discussion.

Technical Skills

Programming Languages: Python, C++, Java, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks and Libraries: FastAPI, Pydantic, LangGraph, React, SQLAlchemy, pytest
AI and Data: NVIDIA Nemotron, structured extraction, retrieval-augmented generation (RAG), OCR, evaluation
Developer Tools: Git, GitHub, SQLite, VS Code
Technical Focus: Software engineering, AI applications, backend development, debugging, secure input validation
